CyberScan Advanced Training Seminar 2020

Meeting called by:	AussiMed Pty. Ltd.
Type of meeting:	Advanced Training Seminar
Please bring:	Your Computer (preferred Laptop), your CyberScan System
Previous knowledge:	Windows basics, CyberScan basics

Agenda topics

Greetings

Part I: Brief overview

CyberScan System
Function, Security Instructions, Hardware details

CyberScan Software

Module: CyberScan Today
Go to database, go to patients, show or hide all patients, select patient

Module: Patients
New patient, select a patient, scan new patient sample, Patient's properties, sort the patients list

Module: Database
Working with groups, working with signals, add new signals, add scanned material, search database, re-arrange database (move, rename, sort)

Module: Database
Templates
Why templates, working with templates, new templates, changes in templates, different template types

Clipboard

How to use the Clipboard, adding signals, availability for testing and projection, make generic remedies

Module: Test Assistant

Main Test

Select a Template, Clipboard or Session for testing, select a Trigger, select a Level, doing the test, assess the result, fine-tuning the result, save the result, re-test a past session, print a report, continue session

Potency Test

Do we need a Potency Test and – if yes – when and how to do it.

Colour Tuning

Simple steps to do a Colour Tuning.
Ready to use Colour Tuning programs.

Module: Projections

Standard Projection – from sessions, Projections from other sources, saved projections, saved generic remedies, Projection in eeWater, Projection via Hand Pads, Broadcasting, Multi-Broadcasting

Printer and Report settings

Printer setup, using Microsoft Word, Templates – setup and customize

CyberScan Software

Start CyberScan, default settings of the system, overview of the CyberScan software, Menu functions, select a language, Database backup and restore, **working with different Databases**

Part II: Advanced Work

The new software Version 9.11

The New Database
Gender: How to work with the gender settings in informational signals AND in client files. How do they interact. What is the idea behind it and what is the best approach?

DB: **fixed groups and signals**, still can be extended by own groups and signals. Many ready to use Templates for all sorts of health problems or tests, Templates can be exported and imported.

The new "fixed" database is for all users who want to do the job quick without the hassle of getting all the different groups and signals together for the most common health issues. Having many different Templates is like having many different protocols: you know the problem, you open the right Template (protocol), you follow them step-by-step – you're finished in no time!

How to treat different illnesses

Asthma, Heart conditions, Arthritis, Cancer e.g. by using the new database and the Templates.

How and when to work with the Chromosomes

As we know today, genetic patterns in the body are not to stay forever. Science found out that the genetic code can be changed. Working with the chromosomes is a step in the right direction.

How to create Templates

It's easy to create a simple Template. It's more demanding to create a Template that works for a specific health problem.

Different types of templates (common and client)

Templates creation with the gender feature in mind.

Medical References

How to create a medical reference

How to test a medical reference

New: How to transfer medical references

New Search functions

The new search functions are available now in the signal database, also for the creation of templates and in the scanning module.

The choice is to search the whole database or create a temporary group from a selected point in the database; Example: Organs and systems > Respiratory. In this case the complete group "Respiratory" including all sub-groups will be searched.

New: Copy and Paste

The new version 9.03 has a copy and paste function. Now it is possible to simply copy and paste single signals, groups or groups including sub-groups. The only restriction is on the blocked signals (will be explained).

Also, the result list of a test can be copied to the Windows clipboard.

New: Different views at the result list of a test

The result lists can be sorted and viewed in different ways.

Also, there is a **new** feature to group the results – which gives a better insight into the result.

New: Working with results

Compare old and new sessions

Re-test old sessions to check the success

New: UF - OF

The new software is more precise and take many different variables into account. For that we have new interpretations for the Under function/Over function results.

How to install CyberScan on a new computer

Many times, I did TeamViewer sessions because of problems due to the installation of the CyberScan. This shouldn't be at all. Here I will show you how simple it is to install the CyberScan on a new computer within 15 minutes. Everyone can do it.

How to connect CyberScan to a computer

To connect the CyberScan to a computer is not rocket science. It's very simple if you know what to look for. This is already included in the 15 minutes setup time.

How to use different databases for different offices

Some doctors have offices in different places and want to keep the databases apart. I'll show you how and explain some easier and better ways.

How to select clients by area

Sometimes it could be very interesting to see on the screen only the clients from a certain area etc.

How to select clients by "External ID"

This field can be used to sort or select specific clients.

How to update/upgrade your software/database

Update or upgrade, both are easy to do, and you don't have to be an IT expert.

With this you'll learn what to look for, how to do the actual update/upgrade and what to consider before you do this step.

How and when to use the eeCard+

There are many rumors and stories around the use of the eeCard+. Here I will explain explicit when, how and for what reason we use the eeCard+.

Aim of the seminar:

While you worked with your CyberScan only "half steam", this seminar will make an expert of you. If you watch carefully you will be able to deal with all the features of the CyberScan and use them to your and your clients benefit.

The fixed Database will help you, not to waste time repeatedly, but give you the freedom to tackle all sorts or health problems secure and in the shortest possible time – without forgetting some important parts.

You and your clients will see the difference and – believe it or not – not advertising will bring you the new clients, but word of mouth. I should know, because I was booked out since 1993 by word of mouth only – and so will you. Happy clients will talk about you and your success – unhappy clients will blackmail you every single day!

I'm really looking forward to seeing you at the seminar.

Resource person:	Wolf-Dieter F. Kehren
