

International Breakthrough

Since 18 June 2014, it is now officially and signed: AussiMed signed an agreement with an international investors group to deliver a minimum of 2,000 CyberScan systems over the next few years to different countries. Experts in the field of quantum physics, lectures by international experts as well as the work of world-renowned clinics made the investors aware of the existence of the CyberScan Medical Device.

The quality of the CyberScan and the fact, that CyberScan is a 100% pure German product were obviously very convincing. Furthermore, also AussiMed's proverbial good customer service was very helpful in the decision-making process and opt for the CyberScan. Ease of use, ease of learning and the new digital training facilities were also crucial.

Thus, opportunities for international events such as conferences, symposia and advanced seminars open up.

The extent of the spread of the cyber scan includes not only human medicine, but also veterinary medicine, the breeders, the racing industry (horses, camels, dogs) as well as agriculture.

Another area with a great demand is the professional sport. We have coined the term "doping without doping". Due to the "fine-tuning" of the body the highest performances will be unlocked, which could otherwise be achieved only with illicit substances.

We are looking forward to see American football clubs, Arabian race camels and race horses in Hong

Kong and Australia performing at a very high rate in the future.

More information and a full demonstration can be found on www.cyberscan.eu

If you still have questions, please contact us on info@cyberscan.eu

and don't forget to add your name and country.

CyberScan's unique algorithm

The algorithm used to calculate the energetic information in an informational signal is extreme important. This can make or break any testing and treatment result.

We developed a unique algorithm for the calculation of informational for CyberScan. With Cyber-

Scan it is possible to differ between an Orange as beneficial food or an Orange as an allergen. Or – as we did with the Medical Research Department of a German University – one can find out whether a bacterium is "normal" or an antibiotic resistant one.

This is extremely powerful und important if it comes to make the right diagnosis and – as common in Europe and Australia – use the informational signals for treatments.

Mobile phone systems classified as high risk from reinsurer

It is repeatedly claimed that electromagnetic pollution from mobile phone systems was not harmful to health. Even infants get today tablets or smartphone to play, so they are constantly exposed to a Wi-Fi radiation.

Now one of the world's largest reinsurers moved this issue back in the spotlight. The Swiss-Re has rated the mobile phone systems in the highest risk level. In addition to the Nanotechnology and chemical EDC

substances from the textile industry, the electromagnetic fields of the transmitting equipment and mobile phones are now considered as potentially high risk.

Bee deaths and Mobile Phone systems

According to a recent British study there are seven billion honey bees missing in Europe. It was assumed previously that pesticides and monocultures were the cause for it, so you now have to

rethink. In fact, Mobile phone systems and other high-frequency technology destroy the immune system of bees. This makes the animals disoriented, they just no

longer find their way home. This also explains why one hardly can find dead bees, which - if pesticides were the cause - would be found in greate number.

Epilepsy after HPV vaccination

It is suspected that epilepsy can be caused by the vaccine against cervical cancer. Vaccination puts the body under stress and can cause a permanent activation of the sympa-

thetic nervous system as well as a loss of the myelin layers surrounding the nerve cells in the brain.

the future, when the body wants to heal itself and places water in this area.

Epileptic seizures occur in

More information can be found in "Naturheilpraxis 3/2014

Digital trainer available

There is an eBook available with instructions for installing the CyberScan and establishing the connection to the computer. Also one can view and download the basic seminar

(Level I). Using the example of "food poisoning" explains how to perform a simple testing and treatment. The Templates are the link between the actual signal

database and the Test Wizard. Here one can learn why and how to create Templates and how these can be very helpful for individual patients or certain diseases.

Databases and Updates

Also in customer service area are different databases available for download - depending on the application. There is currently a dummy database for quick testing of the connection between the CyberScan and computer or even to practice. Further-

more, the main database (Database Full International) with all the signals. There is also a database for the hotel industry as well as another one for the use with animals.

that have been created by Aus-siMed or other users. One should always work with the latest program software, available from the customer service "Software". From time to time we improve things in the software and want you to benefit from this.

In the update area appear all new groups and signals

Scope of application:

AussiMed

Our Goal

Our requirements were,

- to develop and create the best system of energy-medicine according to the latest developments in research and technology,
- to combine German quality and thoroughness with many years of experience in the field of energy medicine,
- to unite the best of EAV, CEDS and other energy medicine methods in our CyberScan, without having to accept the disadvantages or faults of those systems or methods,
- to register CyberScan as a medical device with proof of its therapeutic effectiveness (CE).

We achieved this goal.
